DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-11, drawn to a charge-transfer chemical sensor;

Group II, claim 12, drawn to a method of making a chemical sensor; and

Group III, claims 13-17, drawn to a decontaminating agent for removing contaminants from an area.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature in all groups is the sol-gel material. This element cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. US Patent 6,383,815 discloses the use of a device for measurement of barrier properties of barrier coatings comprising a chemically sensitive layer, such as a sol-gel material, that is responsive to a material of interest substantially as claimed in claims 1-17.

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
